Card/Bubble #1C2426

Text #EDEFEF

Meta #8A9498

Neutral Pill

bg #F1F3F5 / text #6B7280

Gender tags, Inactive status

Flagged for confirmation: web's primary blue (#137fec) and iOS's primary teal (#1F5A63→#2F7C88) are two distinct brand accents currently in use across the product — unclear if this is intentional platform differentiation or needs unification. Two web tokens (logo indigo, card shadow value) are marked "sample from live app" rather than finalized.

Typography

IOS / MOBILE

System sans: **-apple-system / SF Pro Text / SF Pro Display**. Single family — weight carries hierarchy.

Screen Title — **28–30px / 800**

Large Nav Title — **22px / 800**

Nav Bar Title — **18–19px / 700**

Card Title / Button — **16–17px / 700**

In-Chat H1/H2/H3 — **16–17 / 15 / 14px, 700 / 700 / 600** (sits inside chat bubble, below Card Title, above Body)

Body / Chat text — **14–14.5px / 400–600**

Meta / Secondary — **12.5–13px / 400–600**

Section Label / Badge — **10.5–11px / 700** uppercase

WEB

Inter / system-ui / -apple-system / sans-serif — **a distinct family from iOS**, not a shared token.

Page Title — **28–30px / 700**

Card / Section Title — **20–22px / 700**

Stat Number — **28–32px / 700**

Table Primary Text — **15–16px / 600**

Body / Table Secondary — **14–15px / 400**

Label / Meta — **11–12px / 700** uppercase, letter-spaced

Button Text — **14–15px / 600**

Spacing & Radius

IOS / MOBILE

Spacing: 4 · 6 · 8 · 10 · 12 · 14 · 16 · 18 · 20 · 22 · 24px

Cards/rows: 16–20px radius · Modal sheet top: 28px

Buttons/chips/badges: 9999px (pill) · Icon tiles: 10–12px

WEB

Spacing: 4 · 8 · 12 · 16 · 20 · 24 · 32px

Cards/tables: 12–16px radius · Buttons:

8–10px (not full pill

— intentional platform difference)

Badges/tags/status pills: full pill 9999px

Web-specific: stat cards use a 4px solid colored left border as their primary accent device, in place of icon-only differentiation.

Elevation

IOS / MOBILE

Card shadow:

0 2px 12px rgba(20,24,27,0.06)

Small floating buttons:

0 2px 8px rgba(20,24,27,0.08)

Primary button glow:

0 6px 16px rgba(31,90,99,0.28)

WEB

Card shadow: soft single-layer, similar weight to iOS

SAMPLE & CONFIRM

No button glow on web — flat solid fills only (intentional, not a gap).

Iconography

IOS / MOBILE

Simple line icons, 1.4–1.8px stroke, no fill except brand mark and small solid accents (sparkle, paw). Single consistent weight across calendar, weight scale, gender, shield, syringe, document, chat sparkle, paw. Stroke color

#2F7C88

in-context or

#9AA3AC

muted/meta.

Includes three source-footer icon states for AI answers:

book

(guest, FAQ-grounded),

brain

(guest, general knowledge),

pawprint

solid accent (pet owner, records-grounded) — see below.

WEB

Lucide/Heroicons-style, 1.5–2px stroke,

colored per context rather than a single brand stroke color

— deliberate departure from the iOS rule: sidebar icons gray default / blue active; stat-card icon chips use a small circular tinted-fill background matched to that stat's meaning; quick-action tiles use fully colorful flat icons (blue people, amber paw/people, green chart, pink heart, purple shield); table row avatars use colored circular initials or icon placeholders.

AI Source Footer Icons

IOS ONLY

 From our clinic FAQs — guest, FAQ-grounded

 General veterinary knowledge — not from a specific clinic article — guest, unsourced

 From your pet's records — pet owner, records-grounded

Pet-owner answers with no sources show no footer — the scoped banner above the chat already covers that context, so it isn't repeated per message.
